

What Is the Content of Patient-Provider Dialogues in a Telemedicine Multidisciplinary ICU Recovery Clinic?

STUDY DESIGN

- **Qualitative analysis** of patient-provider dialogues
- **19 patients** and **13 caregivers** attending a telemedicine ICU recovery clinic (ICU-RC) visit following hospitalization with critical illness from septic shock or ARDS
- Transcribed dialogues were analyzed for thematic emergence

RESULTS

Two main themes with subthemes were identified

Problem identification

- Health status
- Mental health and cognition
- Medication management
- Health care access and navigation
- Quality of life

Problem-solving

- Facilitating care coordination and transition
- Providing education
- Constructive feedback and guidance

Multidisciplinary ICU-RC presents as an ideal strategy to address the complexity of problems experienced by critical illness survivors at a critical transitional phase of ICU recovery.
